

Evan Luebbert - Software Engineer

New York City | (720) 218-3600 | luebbertevan@gmail.com | linkedin.com/in/evan-luebbert | github.com/luebbertevan

EDUCATION

Colorado State University - Fort Collins, CO | B.S in Computer Science, Minor in Mathematics | 2017 - 2023

Fractal Tech - Brooklyn, NY | Full-Stack Web Development & Software Engineering AI Accelerator | 2025

EXPERIENCE

Valcare - Full-Stack Engineer (Contract) | Mar 2026 - Jun 2026

- Shipped features and production fixes across a multi-tenant recovery and wellness platform used by rehabilitation treatment facilities available on web and mobile via **Capacitor**.
- Served as the sole front-end engineer, owning the recovery dashboard, journaling, daily reflections, announcements, and alumni-to-coach calling features using **React, TypeScript, Next.js, and TanStack Query**.
- Designed and built an AA/NA meeting finder, aggregating 5,500+ meetings from 19 regional sources through **Supabase Edge Functions** and a layered caching pipeline.
- Resolved front-end performance issues and **Postgres Row-Level Security** defects across a **AWS-hosted** multi-tenant healthcare data model.
- Established end-to-end regression testing in **Playwright** wired into **GitLab CI** against a containerized Supabase environment and developed reusable seeding and credential management tooling.
- Evaluated clinical data models for **FHIR** compatibility to support **Medplum** integration and interoperability.

Fosty - Founder, Full-Stack Engineer | 2025 - Present

- Designed and engineered a foster coordination platform for animal shelters and rescues to manage animal records, foster assignments, and communication, replacing fragmented spreadsheets and message threads with a unified system. Built in partnership with Colorado Kitty Coalition and tailored to customer operational needs.
- Architected a full-stack web application using **React, TypeScript, Vite, React Query, React Router, and Supabase (Postgres, Auth, Realtime, Storage)**, with role-based workflows, animal lifecycle management, foster request pipelines, and real-time messaging with context tagging to reduce care delays and improve handoffs.
- Implemented production-grade data integrity and security patterns, including multi-organization permissioning with Row-Level Security, role-gated routing, storage access controls, assignment conflict safeguards, and transactional RPC workflows, transforming rescue coordination into secure, reliable, and auditable operations.
- Drove a UX development process by conducting contextual, protocol-based usability reviews with Colorado Kitty Coalition and senior UX leadership advisors, turning feedback into workflow and UI improvements that reduced friction and improved discoverability, affordance, task speed, and clarity across platform workflows.

KikiTora - Machine Learning & Motion Capture Engineering Intern | 2025

- Built a **Python and Blender** motion retargeting pipeline to map AMASS motion capture data onto KikiTora's standardized SMPL-H skeleton for machine learning training in Unreal Engine.
- Accelerated data generation by 3 months, leveraging 65+ hours / 11,000+ animations of motion capture data and saved \$70K in equivalent motion-capture costs across production pipeline development.
- Solved key challenges in armature normalization, frame alignment, and motion fidelity, producing clean, standardized GLB datasets for reliable downstream model training workflows.

PROJECTS

Climbing Motion Analysis & Visualization Application - Full-Stack Developer | 2025

- Created a tool to analyze climbing movements from video data, overlaying key metrics such as joint angles, speed, and force direction for enhanced performance insights.
- Built with **Python, OpenCV and React**; implemented automated data processing and interactive overlays.

SKILLS

- **Programming Languages:** TypeScript, Java, Python, C++, C#, SQL, JavaScript
- **Frameworks & Libraries:** React, TanStack Query, React Router, Node.js, Tailwind CSS, Next.js, Capacitor
- **Backend & Cloud Tools:** AWS, Supabase, PostgreSQL, Realtime Subscriptions, Azure, Docker, CI/CD Pipelines
- **System Design & Architecture:** API design, Multi-tenant architecture, Caching, Authentication & authorization
- **Testing & Automation:** Playwright, Jest, JUnit, Postman, Automated Workflows
